

SUBSTANTIATED API VALUE

\$2881.71

List-price Anthropic API equivalent

VALUE / COST ROI MULTIPLIER

144.1x

Against \$20 baseline subscription

ENGINEERING OUTPUT RUN RATE

\$1835.48/mo

Continuous delivery volume

ACCEPTED WORK TURNS

25,814

Audited in-repo engineering activity

Verified Enterprise Deliverables

AUDITED TELEMETRY

Partner Center Analytics API

FastAPI microservices, OAuth PKCE flow, sync daemon

\$1,140 value

VPS HR Automation Architecture

Onboarding automation, systems config validation

\$985 value

GitHub Repo Server & CI/CD Tooling

Production pipeline fixes, automated test harnesses

\$460 value

Exchange / Mansol Mail Router

Routing logic, security filters, payload parsing

\$296 value

Audit Integrity:

Data verified from local SQLite telemetry database (WAL mode), mapping Git repositories, commit SHAs, and active worktrees.

The Current Velocity Bottleneck

DAILY CAPACITY LIMIT

On the entry-level Claude Pro (\$20/mo) tier, daily velocity frequently collides with hard 5-hour rolling rate limits:

Current Pro Tier Ceiling ~35 turns / 5 hrs (Locked)

Proposed Claude Max 20x 700+ turns / 5 hrs (Unblocked)

Impact of Rate Limits: Hitting the 5-hour ceiling forces mid-task context stops during complex multi-file refactors. Engineering momentum is lost while waiting for the quota window to reset.

The Investment Proposal: Upgrade to Claude Max 20x

Upgrading Vince Vasile's seat from Claude Pro (\$20/mo) to Claude Max 20x (\$200/mo) completely eliminates the daily rate-limit ceiling, providing 20x throughput headroom for sustained deep engineering across Managed Solution repositories.

MONTHLY NET INVESTMENT

+\$180.00 / mo

14.4x net return on upgrade

VERIFIED OUTPUT RUN-RATE

\$1835.48/mo

Demonstrated monthly value delivery

EXPECTED NET ROI

9.1x – 15.0x

Fully unblocked velocity multiplier
